

Parallel gripper HGPL-B, heavy-duty with long stroke

FESTO

Parallel gripper HGPL-B, heavy-duty with long stroke

Key features

At a glance

- Heavy-duty
The T-slot in combination with the long guide length allows for high forces and torques
- Space-saving
Two parallel and opposing pistons move the gripper jaws directly and without loss of force
- Position sensing
With the position transmitter SDAT every position of the gripper jaws can be sensed using an analogue signal
- Connections for lubrication nipples on the top and underneath of the gripper
 - Double-acting gripper – suitable for external and internal gripping

Data sheet

Characteristic load values at the gripper jaws

The indicated permissible forces and torques apply to a single gripper jaw. They include the lever arm, additional weight forces due to the workpiece or external gripper fingers and acceleration forces during movement.
The zero coordinate line (gripper jaw guide slot) must be taken into consideration when calculating the torques.

Gripper jaw backlash

The plain-bearing guide used in the grippers means that there is backlash between the gripper jaws and the housing.
The values listed in the table apply when new

Opening and closing times [ms] at 6 bar

Without external gripper fingers

With external gripper fingers

The opening and closing times [ms] given were measured at room temperature at an operating pressure of 6 bar with the gripper horizontally mounted and without additional gripper fingers. The grippers must be throttled for larger weights [g]. Opening and closing times must then be adjusted accordingly.

Data sheet

Gripping force F_h per gripper jaw at 6 bar as a function of lever arm x and eccentricity a and b

The following formula must be used to calculate the lever arm x with eccentric gripping:

$$x = \sqrt{a^2 + b^2}$$

The gripping force F_h can be read from the graphs
(→ page 9) using the calculated value x .

Calculation example

Given:

Distance $a = 45$ mm

Distance $b = 40$ mm

To be calculated:

The gripping force at 6 bar
with an HGPL-25,
used as an external gripper

Approach:

Calculating the lever arm x

$$x = \sqrt{45^2 + 40^2}$$

$x = 60$ mm

The graph (→ page 9) gives a value of $F_h = 225$ N for the gripping force.

Position transmitter

The position transmitter continuously senses the position of the piston.
It has an analogue output with an output signal in proportion to the piston position.
